CrowdStrike

Hiring Manager

Re: Frontend Engineer Intern - Fall 2025 (Remote)

What caught my attention about the Frontend Engineer Intern role at CrowdStrike is your commitment to redefining modern security through AI-native platforms. I am currently a Software Engineering co-op student at McGill University (3.88 GPA), and I am eager to contribute to your mission by bringing my technical skills and collaborative spirit to your team.

In leading the development of a board game rental app, I utilized **Java Spring Boot** and **Vue.js** to create a robust full-stack system. As project manager and a full-stack developer, I spearheaded the implementation of 40% of the codebase, ensuring comprehensive test coverage of over 85%. This project honed my problem-solving skills in a team setting and aligns well with your need for someone who thrives in collaborative environments and is committed to delivering high-quality software.

Additionally, my experience in rapid prototyping during McHacks 12, where I developed a frontend using **JavaScript** and **React** for a triage support platform, has prepared me for the dynamic challenges at CrowdStrike. I tackled frontend-backend integration and real-time communication protocols, which directly relates to your requirement for someone comfortable working with modern frameworks and large datasets.

I am particularly drawn to CrowdStrike's innovative use of AI for threat detection and your emphasis on ethical integrity and customer-driven solutions. Your recent enhancements to the Falcon platform, particularly in XDR capabilities, resonate with my values of responsibility and technical curiosity, making me eager to contribute to your team.

I look forward to the possibility of discussing how I can support your mission at CrowdStrike. Thank you for considering my application.

Best regards,

Andres Gonzalez
