McKesson
Hiring Manager
Re: Software Development Intern – Fall 2025

What caught my attention about the Software Development Intern role at McKesson is the emphasis on using AI tools for QA automation, a field I have actively engaged in through my academic and project work. As a Software Engineering Co-op student at McGill University (3.88 GPA), I am eager to contribute my skills in a company renowned for its healthcare impact and innovation.

Having led a team to create a Board Game Rental App, I gained practical experience in full-stack development and test-driven methodologies using **Java Spring Boot** and **Vue.js**. This project required meticulous attention to detail, resulting in an 85% test coverage and a final grade of 95%. My experience in developing robust testing frameworks aligns well with your focus on improving test automation frameworks.

Additionally, my work on the Triage Mate prototype at McHacks 12, where I integrated real-time communication protocols using **Python** and **React**, honed my ability to quickly learn and adapt under pressure. This experience directly supports your need for a proactive problem-solver who can enhance test coverage using AI technologies.

McKesson's dedication to reshaping healthcare delivery resonates with my personal values of responsibility toward the world and ethical software development. The company's initiatives in COVID-19 vaccine distribution underscore an impressive commitment to impactful solutions, making McKesson a compelling place to apply my skills and grow.

I look forward to the possibility of contributing to McKesson's mission while further developing my expertise in AI-driven software development. Thank you for considering my application.

Best regards,

Andres Gonzalez
